

How to install the IFQ Calculator

Create a folder on your hard drive. Give it a name that you will remember, such as “IFQ Calculator”.

Go to the FMA webpage and click the link for the Calculator page. Click the link for the calculator. Click “Save”. When the Save screen appears, navigate to the new folder that you created and save the Zip file to that folder. Exit the webpage.

Using Window Explorer (My computer), go to that folder. Double click the Zip file. It should open and show three files. Highlight and copy these three files (right mouse button – copy).

Hit the back arrow. You should now be in your new folder and should see the Zip file. Paste the copied files in this folder (right mouse button – paste).

Close Windows Explorer.

Click “Start” and then “Run”.

Browse to your new folder. You should see only one file named “Setup”.

Click the file named “setup” and then click “open”.

Then click “run”.

Windows should begin installing the program.
